

EPM Wizard

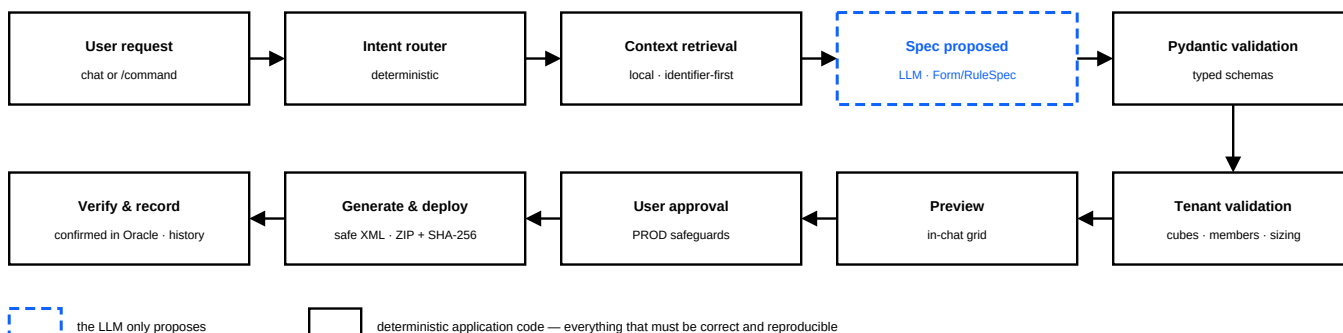

A local-first, ChatGPT-style AI workspace for Oracle EPM implementation.

Build, validate, and deploy Oracle EPM artifacts from a chat interface. Runs entirely on your machine with **docker compose up** — zero config, no API key, IBM Carbon design.

What it does

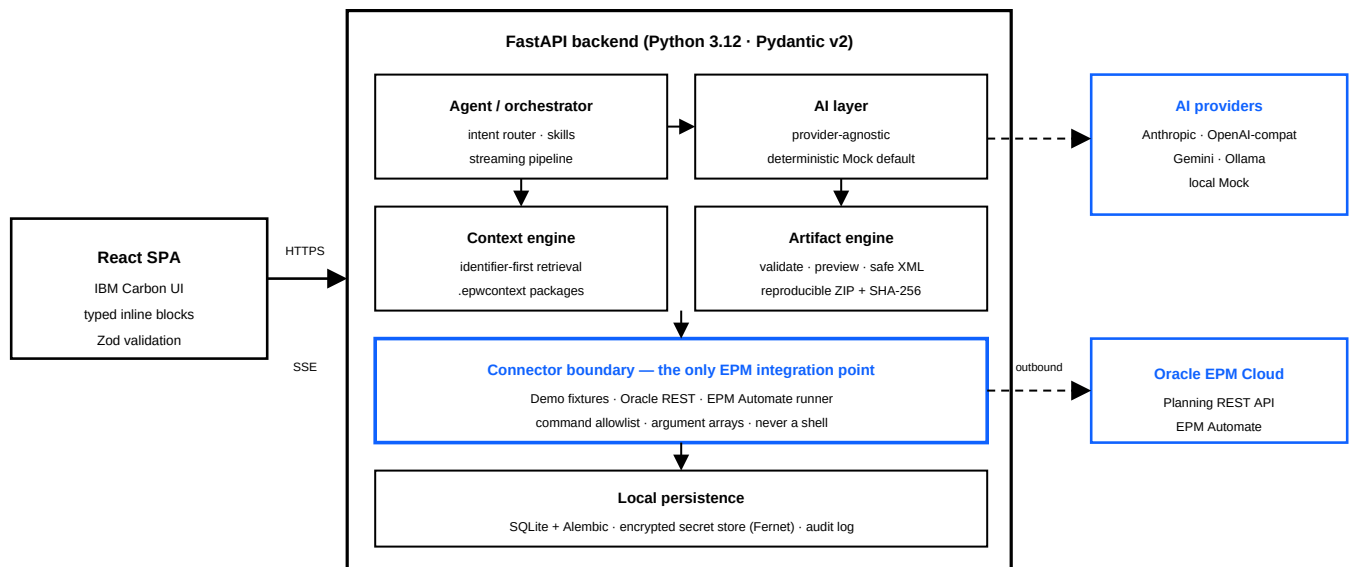

How a request becomes a deployed Oracle artifact

Security model

System architecture

React SPA + FastAPI over SSE. Pydantic owns the canonical schemas — TypeScript and Zod are generated from them (a CI drift test enforces it). The connector boundary is the only path to Oracle.
